

TCH
Boring & Construction
Service

We specialize in making bores from 1/2" to 10" in diameter. We can install your underground products including High Density Polyethylene (HDPE pipe), steel casing, PVC, direct bury cable, etc.

We place jobs from 10' to 1200' using either directional, missile or conventional bore methods. We can dig our own pits, clean up our own mess and even extend your piping by other construction methods once the bore is made. We're not a "cry-baby" boring contractor, but rather a full service utility construction company that understands you have a schedule to meet and we know we won't be back unless we do our part to help you meet or beat that schedule.

We "know" how to make a successful directional bore shot.
